Mitch and Bob,

I spoke with Martha Rider today. The contractor is at the site to move tritium waste but they have been delayed by the rain. Martha said they may not be able to move anything until tomorrow.

I asked her what wastes are being shipped and she said the revised proposal she saw included the scrubber columns and (to her it seemed) everything from the old proposal (15X55 gallon drums, 113 tube stubs, and miscellaneous items) except that not all of the 452 paper bags were included. She said she did not know if this was a typo or not. I have a call in to Bill Lynch. He had hoped the proposal would take everything except possibly the 1000 pound drum compactor.

I asked Martha about tritium waste in the hoods and she said she was not aware there was any waste in the hoods until this past Saturday when she was in the facility doing some clean up. She said she found some intact tubes that had been placed in the hood after they were removed from broken signs. She believes these tubes can be shipped to Shield Source in Canada. She said there are also (4) two gallon step cans that they are going to have to sort through. I told her Betsy would call to discuss tomorrow.

More to come.
